

In-Class Exercise 12: React Routing with Redux

1. `>> npm install --save react-router-dom`
2. Download index.js (and Board.js, Players.js) from <https://www.clear.rice.edu/comp431/sample/tictactoe/react/ic12/index.js> , place in app `src` directory and tictactoeSlice.js in `features/game` directory
3. In index.js, create route for `"/players"`
4. In Players.js, create `const "players"` variable with `useSelector` to hold player names from redux store
5. In Players.js, use `useEffect` or `componentDidMount` to pass users (jsonplaceholder users: <https://jsonplaceholder.typicode.com/users>) to dispatch `requestPlayers` action
6. In tictactoeSlice.js, get the `requestPlayers` action payload array of dummy server users, set state `players` to be array of users' usernames.
7. In Players.js, display an ordered list of players (hint: use `key`)
8. `>> npm run start`

[Submit](#) index.js, Players.js, tictactoeSlice.js to IC 12
