

# In-Class Exercise 2: Pizza Order Form

## Make a validated Pizza order form

1. Text fields for customer name, street address, and phone number
2. User selects size of pizza (radio button group)
3. User selects toppings (check boxes, optional)
4. Button to place order (no validation needed here)
5. Button to clear order (reset type)
6. Name, address, and phone # use `placeholder` attribute
7. Validate that required name, address, valid phone number, and size of pizza has been selected (All can be done in HTML5)

## Pizza Guys Order Form

Name

Address: #### Street Name ...

Phone Number: 123-123-1234

Pizza size

☐ Large ☐ Medium ☐ Small

Pizza Toppings

☐ Sausage ☐ Pepperoni ☐ Olives ☐ Anchovies ☐ Onions

Upload your pizza.html file to Canvas (IC2)
